Work Assignment No.: 0120, Selecto Flash Incorporated
Contract No.: EP-W-05-048

Dear Ms. Zeno:

Weston Solutions, Inc. (WESTON®) is pleased to submit the Sampling Trip Report for the sample collection activities that occurred from June 15 through June 18, 2009 at the Selecto Flash Incorporated site (CERCLIS ID No. NJD002148799) located in West Orange, New Jersey. If you have any questions, please contact me at (732) 417-5808.

Very truly yours,

WESTON SOLUTIONS, INC.

6. On-Site Personnel:

<u>Name</u>	<u>Company</u>	<u>Duties on Site</u>
Michele Capriglione	WESTON	Project Manager, Sampler, Geoprobe® Oversight, Global Positioning System, (GPS) Data Collection
Ernie Salazar (6/15/09 only)	WESTON	Site Geologist, Geoprobe® Oversight, Sampler, GPS Data Collection
Dan Gaughan	WESTON	Sample Management Officer (SMO), Site Health and Safety officer (SHSO), Sampler
Tim Saris	ECDI	Geoprobe® Operator
Casey Frank	ECDI	Geoprobe® Operator

7. Additional Comments:

From June 15 through June 18, 2009 Solutions, Inc., Region 2 Site Assessment Team 2 (SAT 2) personnel conducted a sampling event at the Selecto Flash Incorporated (SFI) site. SAT 2 collected surface soil, subsurface soil, and groundwater samples to determine the priority for further action for this site under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A total of 16 surface soil samples (including two duplicate samples), 17 subsurface soil samples, and 4 groundwater samples (including one duplicate sample) were collected from the site.

Soil sample collection began when ECDI retrieved continuous soil cores from soil borings advanced to a maximum depth of 20 feet using Geoprobe® direct-push technology. SAT 2 then used dedicated, disposable En Core® sampling devices, plastic scoops, and aluminum trays to collect soil samples from the soil cores. Surface soil samples were collected within the 0- to 2-foot interval as measured from the top of the soil column at each borehole, and subsurface soil samples were collected from 2-foot intervals where visual observations suggested potential contamination and/or where field screening of the soil core with a photoionization detector (PID) indicated detections of VOCs.

Groundwater samples were collected using a Teflon[®]-lined mini-bailer from a temporary monitoring well installed by ECDI within four borehole locations. Samples were designated for TCL VOCs analysis.

One rinsate blank (plastic scoop, aluminum tray, and a decontaminated Geoprobe[®] cutting shoe) was collected in conjunction with the soil sampling activities for quality assurance/quality control (QA/QC) purposes. One trip blank sample for low/medium concentration TCL VOCs analysis was collected in conjunction with the groundwater samples.

SAT 2 logged sample locations electronically using GPS equipment and performed post-processing differential correction of the GPS data in accordance with the EPA Region 2 GPS Standard Operating Procedures. The processed GPS data were then transferred to the Sample Location Map (Figure 2) using Geographic Information Systems (GIS).

The solid samples and rinsate blank sample collected by SAT 2 from the SFI site were designated for TCL Organics analysis and TAL Inorganics analysis (including mercury) through the EPA Contract Laboratory Program (CLP). The aqueous groundwater samples and the solid sample designated SFI-S16 were designated for TCL VOCs analysis only through CLP. Organic and Inorganic Traffic Reports are presented in Attachment 1.
